Apply for the Science Communication and Outreach Training Program

Watch for the call for applications in late summer. Deadline for applications is early September.

STEMAP is a 6-month science communication and outreach training program, focused on sharing science in nontraditional learning venues. Through workshops, peer learning, and one-on-one mentoring, participants will learn how to identify and engage partners, communicate their science effectively to public audiences, and design and implement public engagement activities.

Participants will gain new public engagement skills and demonstrated broader impacts experience to cite in their NSF grant applications.

Who is eligible to apply?

- MSU faculty, research staff, post-docs, and graduate students are welcome to apply.
- Applicants must have an active program of STEM-based research.

What participation in STEMAP involves

Over the course of 6 months, participants will be expected to attend:

- A one-hour orientation meeting
- Three or four 2-3-hour workshops
- Two 2-hour group meetings
- Two 1-hour individual meetings with site facilitators

In addition to attending the trainings and designing an engagement activity, participants are expected to implement at least one science engagement activity with community members.

More information?

For questions, contact Miles McNall, Director for Community-Engaged Research, Office for Public Engagement and Scholarship at mcnall@msu.edu.
